V. Appendix

## I. Executive Summary

- College transfer students are not a homogenous group and to treat them as such does not attend to the differences that we have observed.
  - It is important to note that transfer between programs within an individual university (i.e. transferring from an Arts major to a Science major) is not seamless and involves different agreements on transferring credits; thus, even students who are transferring to new programs within the same university do not represent a homogeneous population.
- College transfer students follow a number of different pathways that include (but are not restricted to):
  - Transferring from college to a similar academic program at university.
  - Transferring from college to an unrelated academic program at university.
  - Included in these transfer pathways are students who are:
    - Returning to academics after taking time off between college and university
    - Beginning postsecondary academics after an amount of time away from school, at the college level and continuing directly with university studies
    - Returning to complete a university degree after completing a college diploma
  - Students will also fall into a number of different categories:
    - Students who move directly from high school to college to university
    - Mature students
    - International students
- Comprehensive block transfer credit policies, such as the one in place at Laurier Brantford, result in a high number of transfer credits being awarded and may be a way to accommodate a larger number of students than general transfer credit policies. This type of comprehensive block transfer credit policy awards a designated amount of transfer credits from a specific college diploma program to a specific university degree program.
  - However, even with a comprehensive block credit transfer policy in place, some issues regarding the applicability of awarded transfer credits at the individual student level remain.

### **A. Environmental Scan: Summary**

- There is significant variability in the accessibility of transfer credit information and in the locations of relevant information across institutions in Ontario, which makes the information difficult and time consuming to both access and evaluate.
- There is also considerable variability in the transfer credit agreements within Ontario universities and between the various colleges and universities.
  - Many universities are currently expanding and/or changing their transfer credit policies for college graduates.
  - It appears that final decisions regarding total number of transfer credits is done on an individual basis regardless of whether or not a comprehensive block transfer credit policy or a general transfer credit policy is in place

### **B. Comparison of College Transfer Students to non-College Transfer Students: Summary**

- A significant difference was observed in the number of transfer credits obtained by students enrolling at Laurier Brantford vs. those enrolling in the Faculty of Arts at the Laurier Waterloo campus. The average number of transfer credits awarded at Laurier Brantford was 4.58, while the average awarded for Faculty of Arts students was 2.32 (for an overall average of 3.65). This may be attributed to the comprehensive block transfer credit policy that was instituted at Laurier Brantford in 2009 vs. the more general policies observed in the Faculty of Arts at Laurier Waterloo.
- Full-time and part-time college transfer students maintain a higher GPA than non-college transfer students.
- Full-time college transfer students maintain a higher GPA than part-time college transfer students.
- College transfer students attending Laurier Brantford maintained higher GPA's than college transfer students in the Faculty of Arts at Laurier Waterloo.
- College transfer students who received 5.0 or greater transfer credits maintained an 11% higher GPA than non-college transfer students, while college transfer students who received fewer than 5.0 transfer credits maintained a 6% higher GPA than non-college transfer students.

- College transfer students held a higher first term GPA than their entry-related and progress-related cohort in all years investigated except for the 2008 college transfer students vs. 2008 non-college transfer students comparison.
- Average GPA scores of college transfer students have increased in each of the last 3 consecutive academic years.
- Average GPA scores of non-college transfer students have decreased in each of the last 4 consecutive academic years

### **C. Focus Groups: Summary**

#### Expectations

- Students reported that college instructors provided a sense of what to expect at a university setting, almost always emphasizing the higher academic standards.
  - students were often told to expect dropping a full letter grade if they transferred
  - Significantly, most of the students interviewed noted that this was not the case.
- College instructors also warned students about the shift from a more structured academic environment in college, to the university context in which students were expected to manage and motivate their own academic goals. Most students found this to be accurate.
- Most students expected a “more intensive” academic experience in transferring to a university program. This expectation included both the types of episteme, and the particular methods of evaluation that they would encounter.
- The old model of identifying colleges with “practical” knowledge, and universities solely with “theoretical” knowledge is giving way to a paradigm that identifies programs and disciplines, rather than institutions, as the determining factor when evaluating specific sets of learning and assessment models.

#### Experiences

- Several students mentioned that courses relying exclusively on multiple choice exams as an assessment model limited their learning by focusing on “regurgitating” data from the textbook, and that these assessment models left little room for “critical thought.” Significantly, their preference for other models (such as essay and short answer) were tied directly to their desire to engage in those aspects of “higher order reasoning” that attracted them to university studies in the first place.

- Another common assumption is that the modes/types of assessments are radically different in college and university settings. Focus group participants suggested that changes were discipline specific and related to course size, rather than being institutionally based.
- Transfer students noted some difficulty in adjusting to their university's assessment model – one that had far fewer assignments, but one that also had fewer opportunities for students to display their progress in working through course material and impact their final mark.

### Transfer process

- College transfer students seemed expected to simply know about the process, or even know how to access help when challenges arose during the transfer process. Thus, the problem for many transfer students was not simply that they lacked information about the transfer process, but that they also lacked information about how to access the resources they needed to get it.
- Even when the college had an articulation agreement with a specific university, there did not seem to be a consistent, routinized program for assisting students to make the transfer.
- Transfer students also pointed out that the problem was not that the university website did not have the information that they needed. In fact, several students mentioned that the website was “cluttered with too much information everywhere.” The central issue for most transfer students was accessing that information from the website was a frustrating and time consuming process.
- Timing also proved to be a crucial aspect to how equipped transfer students felt in the process. Participants cited some issues regarding when they received responses to inquiries, acceptance notices, or information from Academic Advising - in particular over the summer.
  - Some college transfer students could not get into certain classes that needed as pre-requisites due to the lateness of their acceptance – resulting in significant delays regarding their program completion.
- Transfer students seemed to get multiple answers from various sources each time they talked to someone new. In other words, there appears to be a need to consolidate, establish, and communicate uniform guidelines among staff and faculty.

### Recognition of disparity in transfer demographics

- Interviews revealed a larger diversity among college transfer students than was previously expected.
  - These groups include: “similar program transfers”, “alternate program transfers”, mature students, and international students.
- The university can be more effective in assisting them with those challenges by identifying the demographic grouping they belong to, and developing group specific strategies rather than inundating all of the groups with generalized information that may or may not apply.

### Credits

- Transfer students reported that it was difficult to find information from either their college or university about transfer credits. These students did not know what these credits were worth, what they would be applied to, or why they didn’t count in the way a student thought they might.
  - In addition to the amount of transfer credit students receive, transfer students reported being perplexed by the seemingly arbitrary manner in which those credits would be applied.
- College transfer students expressed frustration with the amount of academic overlap in transferring from college to university. Several transfer students noted that they had already completed certain aspects of their studies, but had to repeat almost identical curricula in order to satisfy various university requirements.
- The last area of frustration for transfer students regarding transfer credits is their application of those credits towards electives. Numerous students reported that almost all of the credits they did receive “ don’t apply to their program [and] only count for electives.”

#### **D. Staff and Faculty Interviews: Summary**

- The promotion of transfer and formal articulation agreements is managed by the colleges although recruitment staff at WLU also promote these agreements at college career fairs.
- Laurier Brantford staff appear more aware and more knowledgeable than faculty about college transfer students.
- Academic advising at Laurier Brantford is done by full-time staff, while academic advising in the Faculty of Arts at Laurier Waterloo falls under the responsibility of faculty acting as undergraduate advisors.
- Faculty are unaware of college transfer students unless they self-identify. This was cited as the major reason for turning down our requests for faculty interviews.
- Academic advisors know who college transfer students are because these students have to self-identify and/or that information is more readily available to academic advisors through student records and transcripts.
- College transfer students may not be aware of the differences between college and university from an academic (or non-academic) perspective prior to transfer.
- Differences in workload are the most often cited; differences in course content and evaluation are also frequently mentioned.
- College transfer students do not fit neatly into university culture.
  - They are not really first year students because they are older, have prior post-secondary academic experience and have advanced standing due to their transfer credits.
  - The majority of college transfer students are not really in a position equivalent with second-year because they may have to take prerequisite courses with first year non-transfer students.
  - Headstart programs and Orientation week events allow incoming students the opportunity to learn how to navigate the non-academic aspects of university and the potential of engaging in dialogue with upper-year students about academics, however, college transfer students do not typically attend these events
- College transfer students may be more focussed on their academics.
  - May be due to a higher level of maturity; previous post-secondary academic experience; higher personal expectations and many other potential factors.

- College transfer students, on average, do not arrive at university with an understanding of the potential/realistic differences between college and university academics.
- College transfer students are frustrated by the lack of specific and applicable information regarding how they, on an individual basis, can directly apply their transfer credits.
  - One re-occurring question involves the lack of information regarding why some college courses are not equivalent to university courses.

## II. Component Reports

### **A. College/University Transfer Credit Environmental Scan: Report**

#### Methodology:

An email was sent to the Registrar's Office in all recognized Ontario universities, requesting information relevant to any specific or general formal articulation agreements they currently have with Ontario colleges. We also asked for specific or general information on transfer credit policies where no formal articulation agreements were present. Only UOIT, Nipissing University and Algoma University did not respond to our request. We combined the above information with information and data from ONTransfer website as well as information on policies gathered from specific university websites. We excluded joint university/college programs unless they had a specifically stated transfer element.

This information was compiled and organized and can be found on the document "Ontario College-University Transfer Credits Environmental Scan", which is available in Appendix: 1. The information is broken down by school, separating transfer policies (articulation agreements), from general policies (transfer policies/credits that require a specific college diploma but are not attached to a specific school), and the general transfer policies/credit system schools employ. In the case of articulation agreements, the college involved is noted. Wherever possible the date the policy was created (or in the absence of a creation date the time of most recent renewal) was included. The policies themselves follow the specific degrees they are intended to promote; followed by the transfer credits or advanced standing awarded by the policy; followed by the requirements necessary to complete the degree; and then the grade requirements for the policy/program (policy/program first, then the individual mark each credit has to meet to be considered for credit at the university).

#### Summary

It was observed that many universities are expanding their transfer credit policies for college graduates (often by taking existing articulation agreements and employing the same policies for students outside the articulated schools they were intended for) but university promotion of this fact seems less pronounced. The institutions at the heart of promoting transfer agreements and transfer credits, based on what was observed through this research, were the colleges. The universities that appeared to have the most vested interest, and some of the more robust policies, in transfer credits and transfer credit agreements were Wilfrid Laurier University – Brantford campus, the University of Windsor, Trent University and York University (though York mainly does this by employing a few generically applied policies and then individually identifying each and every program they offer to each generic policy). Universities that were found to be least accessible to college students were institutions like McMaster University, the University of

Toronto (and its affiliated campuses), the University of Ottawa and Queen's University. Institutions that had the most unique approach to transfers and transfer credits were the University of Ottawa and RMCC. RMCC provides a pathway into the school by offering accreditation through colleges by way of online studies (specifically a Military Arts and Science accreditation), after a prescribed amount of which students are granted full entrance into a program with advanced standing. The University of Ottawa is relatively sparse in relation to college pathways, but it has a robust program for allowing its students to take courses at institutions that are geographically close to them (as these policies did not involve a change in program and were essentially a one-off system from college to university they were not included in the environmental scan).

When looking at the average amount of transfer credit provided to college students transferring to universities, the standard is one full academic year (two semesters) of study. This is a very general average however, as some schools have transfer credit policies that have no real effect on the expected graduation date (i.e. only a few courses are given university credit, and the policy is used more as a metric for admission), and others require only two or three terms of full study for an honours degree. The acceptable grades for admission and course transfer credit acceptability are a bit more uniform, with an average of B/3.0/75% being required for admission, and an average grade of 70% required for a college credit to be considered for university credit. These numbers are a bit misleading, however, as many schools still apply a grade equivalence scale. This means that the actual threshold (after grades have been adjusted to the specific university's standard) would require higher averages, and involve more subjective fluctuation than would be assumed based on the minimum grades outlined by the policy. It is also worth noting that many of the general transfer credit policies of universities, and the diploma specific transfer credit policies (and even some articulation agreements) are still judged on a case by case basis. This means that policies outline a maximum amount of transfer credits available, but that the actual amount allotted is still reliant on an individual review to determine the amount of transfer credit student's will actually receive (note: this is the case in any policy where the words "students will receive a maximum" are used). Similarly there are still cases where students will be approved for a number of transfer credits from admissions, but not all these credits will be applicable to the given degree they enroll in. All of these factors lead to a transfer credit system that appears more robust and advantageous than is likely the case in practical application.

The environmental scan represents a comprehensive survey of transfer credit policies. The survey has every policy put forward and promoted by the universities in question, as well as some of the more minor policies. It is, however, beyond the scope of this study to guarantee that every possible minor policy is included, due to either a policy not being clearly posted or promoted; the current changing landscape of transfer credit policies in Ontario; or misrepresentation regarding specific transfer credit policies or general transfer credit policies recognized by universities. Notably, when requests for information were first sent to the universities outlined in the environmental scan document, OCAD, Carleton, Ryerson,

Laurentian, McMaster, and the University of Waterloo all noted that they were either currently reviewing or changing their transfer credit policies or had recently done so. Similarly, the environmental scan document had to be revised on three occasions during the limited duration of this project because of the discovery of new or changed policies while undertaking a review of the information before submission. All of these factors would seem to imply that transfer credit policies in Ontario are currently in a state of flux.

**B. Comparison of College Transfer Students to Non-College Transfer Students: Report**

Methodology:

The Office of the Registrar at Wilfrid Laurier University provided two random samples of de-identified student data for transfer and non-transfer students (a sample of up to 50 students from each campus for each cohort from 2008 to 2011). This data included term by term GPA scores for each student as well as area of study and courses taken. This data allowed the primary researchers to calculate overall averages, to evaluate course/program relevant success rates, to compare scores across groups and to compare scores in areas of credit/degree granted. Graduation rates for the 2008 and 2009 cohort were also requested but very little of this data is actually available since few of the students had applied to graduate when the data set was generated.

Summary:

When comparing a random sample of transfer credit students to non-transfer credit students at Wilfrid Laurier University (WLU) we find a defined and consistent pattern. Transfer credit students are those who transferred from a college to WLU, while non-transfer credit students are those who moved directly from high-school to WLU. When comparing means of overall GPA, transfer credit students had acquired a cumulative 7.41 GPA in comparison to a cumulative GPA of 6.85 for their non-transfer credit counterparts. As well, transfer credit students had a higher real GPA of .56 compared to their non-transfer counterparts. This dynamic translates into transfer credit students having a cumulative GPA 8% higher than non-transfer students; these results were statistically significant at .001.

When controlling for full time and part time transfer credit students we find similar results, with full time transfer credit students having a mean cumulative GPA of 7.47 and part time transfer students having a mean cumulative GPA of 7.30; a real difference of .17 (or 2%) between full time and part time transfer credit students. In this case, full time transfer credit students had a higher real cumulative GPA of .62 compared to their non-transfer credit counterparts, resulting in a 9% higher cumulative GPA than non-transfer credit students. Part time transfer credit students had a higher real cumulative GPA of .45 compared to non-transfer credit students, resulting in part time transfer credit students having a 6% higher cumulative GPAs than non-transfer credit students. All of these results were statistically significant at .001. The results describe above are displayed in Figure 1.

*Figure 1: Cumulative Mean GPA Comparison of Full-time and Part-time college transfer students (CTS) and non-college transfer students (non-CTS).*

	<b>Full-time CTS</b>	<b>Part-time CTS</b>	<b>Non-CTS</b>
Cumulative Mean GPA	<b>7.47</b>	<b>7.30</b>	<b>6.85</b>

Figure 2 displays mean comparisons that were undertaken to determine if there was any difference in transfer credit students and non-transfer credit students from Laurier Brantford and Laurier Waterloo. Only students transferring into the Faculty of Arts at Laurier Waterloo are included in this analysis. In this case transfer credit students had a higher mean cumulative GPA than non-transfer credit students; however, both groups from Brantford campus held higher mean cumulative GPAs than their Laurier Waterloo counterparts. Laurier Brantford transfer credit students had a 7.51 mean cumulative GPA compared to non-transfer credit Brantford students who had a mean cumulative GPA of 6.46. This difference resulted in Brantford transfer credit students having a higher real cumulative GPA of 1.05, resulting in Brantford transfer credit students having a 16% higher cumulative mean GPA than non-transfer credit students from Brantford. When compared to the overall cumulative mean GPA of non-transfer students, and non-transfer students from Waterloo the results were a 9% higher mean GPA (a real difference of .66), and a 17% higher mean GPA (a real difference of 1.13) respectively. Waterloo transfer credit students had similar results when compared to non-transfer credit students from Waterloo, as Waterloo transfer credit students had a higher real cumulative mean GPA of .87, resulting in Waterloo transfer credit students having a 13% higher mean GPA than non-transfer credit students from Waterloo. Compared to the overall cumulative mean GPA of non-transfer students, Waterloo transfer students had a higher real cumulative mean GPA of .40, resulting in a percentage difference of 5%. Comparing transfer credit students from both campuses, Brantford transfer credit students had a higher real cumulative mean GPA of .26, resulting in a 3% difference in mean GPA between Brantford and Waterloo.

*Figure 2: Cumulative Mean GPA Comparison of Laurier Waterloo & Laurier Brantford College Transfer Students and Non-College Transfer Students*

	<b>Laurier Brantford</b>	<b>Laurier Waterloo (Faculty of Arts)</b>
CTS Cumulative Mean GPA	<b>7.51</b>	<b>7.25</b>
Non-CTS Cumulative Mean GPA	<b>6.46</b>	<b>6.38</b>

To determine whether the amount of transfer credits had an impact on academic performance, a mean comparison of the quantity of transfer credits and the impact on cumulative mean GPA was undertaken. In this case, students who received 5 transfer credits (equal to two full terms of transfer credits) or higher and identified as “high transfer credit students,” were coded as 2. Students who received 4.9 transfer credits or less, identified as “low transfer credit students,” were coded as 1 and students without transfer credits were coded as 0. This analysis, displayed in Figure 3, resulted in high transfer credit students having a cumulative mean GPA of 7.62, and low transfer credit students having a cumulative mean GPA of 7.28. Non-transfer credit students

maintained their cumulative mean GPA of 6.85. When looked at together, high transfer credit students had a higher real mean GPA of .34 compared to their low transfer credit counterparts, resulting in high transfer credit students having a 4% higher mean GPA. When compared to non-transfer students, high transfer credit students had 11% higher mean GPAs (a real difference of .77), and low transfer credit students had 6% higher mean GPAs (a real difference of .43) compared to non-transfer students; all of these results are statistically significant at .001.

*Figure 3: Cumulative Mean GPA for “High Transfer Credit Students”, “Low Transfer Credit Students”, and Non- Transfer Credit Students.*

	<b>High Transfer Credit Students</b>	<b>Low Transfer Credit Students</b>	<b>Non-Transfer Credit Students</b>
Cumulative Mean GPA	<b>7.62</b>	<b>7.28</b>	<b>6.85</b>

Figure 4 describes the overall mean of 3.65 transfer credits that were awarded to students transferring from college to WLU in our sample of the years 2008-2011 (2556.25 credits awarded across 700 students). Students transferring to the Faculty of Arts at Laurier Waterloo, were awarded a mean of 2.32 transfer credits (671.25 credits across 289 students) while students transferring to Laurier Brantford had a mean of 4.58 credits awarded (1885 transfer credits awarded across 411 students).

*Figure 4: Mean Transfer Credit Comparison of Laurier Brantford and Laurier Waterloo (Faculty of Arts) students.*

	<b>Laurier Brantford</b>	<b>Laurier Waterloo (Faculty of Arts)</b>	<b>WLU</b>
Mean Transfer Credits Awarded	<b>4.48</b>	<b>2.32</b>	<b>3.65</b>

An analysis of first term GPA’s was undertaken to determine if there were any significant differences between college transfer students and their non-transfer student counterparts. College transfer students enter university with a specific cohort, defined as “Year x”, and labelled “Entry related” (e.g. entry into university in 2011 would be all students who arrived at WLU in the Fall term of 2011). If college transfer students enter with an average of 3.65 credits, they have been awarded 75% of one full year’s credits (assuming 5.0 credits for a normal course load). Since college transfer students have advanced standing in this respect, it is also necessary to compare them to the previous year’s cohort, defined as “Year x-1” and labelled “Progress

related” (e.g. 2011 college transfer cohort would be compared to 2010 non-college transfer cohort) since they are closer in overall credits accumulated. Figure 5 includes the results of the individual comparisons discussed below.

Therefore, first term GPA comparisons were made between transfer credit students from the 2008 cohort and the 2008 non-transfer credit cohort; transfer credit students from the 2009 cohort compared to the non-transfer credit students from the 2009 and 2008 cohorts; transfer credit students from the 2010 cohort compared to the non-transfer credit students from the 2010 and 2009 cohorts; and transfer credit students from the 2011 cohort compared to the non-transfer credit students from the 2011 and 2010 cohorts. In all cases except the entry-related 2008 cohort, the first term mean GPA of transfer credit students was higher than non-transfer students of the same cohort year. Though 2008 and 2009 transfer credit students had the same first term mean GPA, as of 2010 we see a consistent increase in first term mean GPAs for transfer credit students. This is seen most clearly in the 2011 cohort, where the first term mean GPA was 21% higher than the 2011 non-transfer credit students’ first term mean GPA and 14% higher than the 2010 non-transfer credit students’ first term mean GPA.

Transfer credit students from the 2008 cohort ( $n = 158$ ), had a mean first term GPA of 7.07, compared to a 7.17 first term mean GPA for non-transfer students from the 2008 cohort ( $n = 22$ ). The difference in first term GPA between these two groups is very small in this case, with non-transfer credit students having a higher real first term GPA of .1, a percentage difference of 1.3%. Though the result was not statistically significant (.844) this is likely due to the size of the sample in this case. As we did not have data for the 2007 cohort a comparison of the first term GPA of transfer credit students from the 2008 cohort to the first term GPA of non-transfer credit students from 2007 was not possible.

Transfer credit students from the 2009 cohort ( $n = 193$ ), had a mean first term GPA of 7.07, compared to a 6.82 first term mean GPA for non-transfer students from the 2009 cohort ( $n = 95$ ). Transfer credit students from 2009 had a higher real first term mean GPA of .25 compared to non-transfer credit students first term mean GPA from 2009; resulting in 2009 Transfer credit students having a 3% higher mean first term GPA than non-transfer credit students from the same cohort year. When compared to non-transfer credit students first term mean GPA from the 2008 cohort we see that the **2009** transfer credit cohort had a lower real mean first term GPA of .1, resulting in 2009 transfer credit students having a 1.3% lower first term mean GPA than their 2008 non-transfer credit counterparts. These results were statistically significant at the 91<sup>st</sup> percentile range, with a statistical significance of .096.

Transfer credit students from the 2010 cohort ( $n = 162$ ), had a mean first term GPA of 7.24, compared to a 6.47 first term mean GPA for non-transfer students from the 2010 cohort ( $n = 97$ ). Transfer credit students from 2010 had a higher real first term mean GPA of .77 compared to non-transfer credit students first term mean GPA from 2010; resulting in 2010 Transfer credit students having a 11% higher mean first term GPA than non-transfer credit students from the

same cohort year. When compared to non-transfer credit student’s first term mean GPA from the 2009 cohort, we see that the 2010 transfer credit cohort had a higher real mean first term GPA of .42, resulting in 2010 transfer credit students having a 6% higher first term mean GPA than their 2009 non-transfer credit counterparts. These results were statistically significant at the 93<sup>rd</sup> percentile, with a statistical significance of .073.

Transfer credit students from the 2011 cohort (n = 167), had a mean first term GPA of 7.44, compared to a 6.10 first term mean GPA for non-transfer students from the 2011 cohort (n = 93). Transfer credit students from 2011 had a higher real first term mean GPA of 1.34 compared to non-transfer credit students first term mean GPA from 2011; resulting in 2011 Transfer credit students having a 21% higher mean first term GPA than non-transfer credit students from the same cohort year. When compared to non-transfer credit students first term mean GPA from the 2010 cohort we see that the 2011 transfer credit cohort had a higher real mean first term GPA of .97, resulting in 2011 transfer credit students having a 14% higher first term mean GPA than their 2010 non-transfer credit counterparts. These results were statistically significant at the 93<sup>rd</sup> percentile, with a statistical significance of .073.

*Figure 5: Cumulative Mean GPA of college transfer students and non-college transfer students by cohort*

	<b>CTS</b>	<b>Non-CTS</b>
2008 Cohort	<b>7.07</b>	<b>7.17</b>
2009 Cohort	<b>7.07</b>	<b>6.82</b>
2010 Cohort	<b>7.24</b>	<b>6.47</b>
2011 Cohort	<b>7.44</b>	<b>6.10</b>

At the time the current data set was obtained, very few students had applied to graduate and thus it was not possible to determine whether college transfer credit students, on average, can take advantage of their transfer credits by graduating ahead of their entry-related counterparts and/or at the same pace as their progression-related colleagues. Current analysis has determined that in only two of the 115 cases where a graduation date was provided were non-college transfer students but more current data will be used to confirm and reanalyze these findings.

**C. Focus Groups: Report**

Methodology

The following is an analysis of 11 focus groups and 15 single participant interviews for the Postsecondary Student Mobility project. Of the 11 focus groups that were conducted 6 groups were from the Brantford campus and 5 from Waterloo. There were 25 college transfer student participants, 9 males and 16 females, ranging from first year students to fourth year students. The following is a list of questions that were asked at each focus group interview.

1	What college program you transferred from and what program you transferred into at WLU?
2	Prior to starting at Laurier Brantford/WLU Waterloo, what were your expectations of university life?
3	How would you describe your experiences in transferring from college to Wilfrid Laurier University?
4	How many transfer credits did you receive?
5	What specific assistance did you receive from your college when transferring to WLU and then also what assistance did you receive from WLU?
6	What parts of university life do you find enjoyable and what aspects do you not enjoy?
7	Did you find the website helpful?
8	What were your expectations about academics at university relative to what you found your college experience of academics? And since arriving have your expectations been met?
9	What advice would you offer other college transfer students who were either about to start university or thinking about doing this?
10	Anything else that you wanted to add to the discussion?

Expectations and Experiences

*General Expectations*

Students responded to questions about the expectations that they held prior to attending university in a variety of ways. Some students re-iterated a more traditional paradigm as reflected in comments like; “College is more hands-on, university is more research focused.” However, other students foregrounded their perception that this model espoused a false dichotomy, and that the amount of emphasis that is being placed on either theory or praxis is

more closely correlated to individual *disciplines* rather than being an institutionally specific mandate. Several conversations within the focus groups identified how programs in both colleges and universities either reify or resist that generalized assumption about the types of learning that take place in each institution. For example, one student noted that the types of learning and modes of assessment they experienced were distinctly “program based.” In other words, they had engaged in some theoretical approaches in college, as well as experiencing some hands-on experience in their university context. This student went on to articulate the traditional paradigm - the idea that university programs involved “more theory and [were] a bit less practical” – only to assert -“I don't think high schools can really make that generalization anymore.” These observations seem to indicate that, at least from a student perspective, the old model of identifying colleges with “practical” knowledge, and universities solely with “theoretical” knowledge is giving way to a paradigm that identifies programs and disciplines, rather than institutions, as the determining factor when evaluating specific sets of learning and assessment models.

As well, students expressed a general concern about the “higher academic standards” they expected to encounter and some trepidation about entering a program that seemed “less structured” in comparison to their previous college experiences. Surprisingly, several students also noted their reluctance to self-identify as college transfer students to peers. One student explained: “I wouldn't say it's discrimination but [there is] a kind of stigma that's attached to it (college).” Another student admitted that they “wouldn't dare wear a college sweater here... it's really frowned upon.” These same students, however, also noted that they felt comfortable self-identifying as college transfer students to their instructors, and went so far as to recommend it as part of a good survival strategy for future transfer students.

### *Sources of General Expectations*

Students identified several sources for these perceptions. Almost all of the focus group participants mentioned family members and/or friends as important forces that shaped their perception of what colleges and universities are, how they function and what is so different about the two institutions. Those same students were also quick to report that those sources had varying levels of experience.

Media sources were also identified as an information source that shaped students' perceptions of college and university life. These sources included both entertainment media (films, television shows, videos) and information media (news, magazines, newspapers). As one student commented, “So my perception was like partially media and partially just made up stuff that I had in my head that I had just created.”

The final source for these perceptions included college instructors and high school teachers. As would be expected, students reported that college instructors provided a sense of what to expect at a university setting, almost always emphasizing the higher academic standards (students were

often told to expect dropping a full letter grade if they transferred). College instructors also warned students about the shift from a more structured academic environment in college, to the university context in which students were expected to manage and motivate their own academic goals. A significant insight that developed from the focus group discussions was the impact of high school teachers and guidance counselors on students' perceptions of college and university programs. Several students mentioned how the descriptions of, and information about, colleges and universities that they received in high school shaped their perceptions of what those institutions do, and where, as students, they "belonged." One student reported having a low GPA in high school and being told that they would never go to university. After a year in the workforce, they attended college and received very high marks – they transferred to a university program in year two and have recently been accepted into a graduate program. Students also recognized how the "messages" about those institutions and their own academic future were not always overt, or readily transparent. In addition to direct comments about a student's potential for success in college or university programs, students seemed to decode a host of other, subtler, indicators of their academic abilities. This area did not fall under the purview of this study, however, a future study that examines the impact of high school experiences on transfer students may yield some important insights into those decision making processes.

### *Academic Expectations*

As was mentioned above, most students expected a "more intensive" academic experience in transferring to a university program. This expectation included both the types of episteme, and the particular methods of evaluation that they would encounter. "I was expecting more theory but I was [also] expecting the standards to be at least as tough as they were in college." While there were students who expressed some anxiety about this prospect, the vast majority expressed enthusiasm at the prospect of facing these new challenges. As one student noted: "I was so excited to come to university and to be around other people who took school seriously."

In fact, the expectation of encountering a culture of serious academic inquiry at university was a recurring theme in multiple focus groups. While the actual experiences of students will be discussed in detail below, it is worth noting here that many students' experiences did not align with these expectations. Even in non-academic scenarios, students experienced a disparity between their perceptions of college and university campus life. For example, one student reflected on their experience with various types of student government at both the college and university level: "[I was with] the student union because I was part of our student association at college ... they were extremely, extremely different. I thought that actually the university student union would be much more organized and ... structured than college but I was very wrong."

### *Sources of Academic Expectations*

As with the more generalized perceptions about university life, students' expectations about academics were shaped by a variety of forces. While at least one participant confessed that they "didn't know what's expected of me so I think I sort of came into it blind," most students had a definite, if not always accurate, image of what pursuing academics in a university setting would entail. Students reported that both high school teachers and college instructors issued "warnings" about the difficulties of university life. Both groups of educators seemed to emphasize that in their own settings (high school and college) a greater amount of assistance was being provided to assist with student success.

Other sources included both friends and family. Students also realized after working through the transfer process the limitations of such sources. One student who was accessing information about the process from friends realized that her situation (transferring from college to university) differed quite drastically from her friends who had transferred from one university campus to another. Likewise, another student who mentioned that "all my friends went to university" realized that their experiences of attending university directly after high school was markedly different than her own process of transferring from college to university. Another student who relied on the fact that their "dad went to Laurier in Waterloo" found that his input had value in preparing them for the most general challenges of university life, but helped less in negotiating the nuts and bolts of transferring from one institution to another.

### *Academic Experiences*

The discussion about student experiences elicited responses that can be organized into a few key categories. This section will begin with some of general feedback provided by students, particularly in reference to their expectations of entering into a "culture of serious academic inquiry" as they transferred to a university setting. The second category collects student feedback on the shift in class size and the role of the individual instructor in the transfer process. The last major category reflects the students' emphasis on the issues surrounding assessment at university in contrast to their experiences of assessment at college. This final category is broken into two sub fields: assessment models and assessment rationales.

#### *The culture of academia*

Students reported that certain preconceptions about transferring from a college to a university were confirmed, while others were modified by their experiences. For example, students who had been advised that, in transferring from college to university, there would be a shift of academic responsibility from the staff and faculty to the actual student found this to be true. Several students reported that, to be successful in university academics required a greater level of

self-determination, self-motivation and self-confidence. As one student put it, “there's a lot more that you need to be doing on your own time.”

One surprising feature of the focus groups was the number (and nature) of the comments that students made about their academic experiences. While students had received “warnings” from high school teachers, college instructors and, at times, parents and friends about the type of intellectual work that university studies require, many reported that the level and amount of work was quite manageable. It was not uncommon to hear students make remarks such as: “I have noticed differences but [they are] not as extreme as they've lead us to believe” or “I thought it was going to be a lot more difficult than it is.” Granted, we did not correlate the GPA of the focus group participants to their comments and have no way of knowing if their perception of their own success is consistent with the assessment of their work by their instructors. However, several students reported that they were experiencing academic success (meaning that they were meeting or exceeding their own academic goals). As one particularly self-reflexive student remarked: “I found that I've actually been doing a lot better in university than I ever did in college. I'm not sure if it's because I came in expecting it to be harder, or if I just care more now...that I've realized I want to pursue more education.”

When probed about these experiences students followed up with some important insights about the differences between the college and university experience. Even as some students noted, “that the pace was ... quite a bit slower than what I was used to at the college level,” others were quick to clarify that “from a college aspect...the work ... wasn't as intensive, there was just a lot more to do.” These comments led to discussions about both, the *number* of courses and assignments that college students were used to and the *type* of analysis that they were expected to perform on them. This comparison will be outlined in greater detail in the section on assessments, what is more pertinent here is the perspectives of the students on those differing pedagogical models. Far from distaining one and favoring the other, most students reported a distinct value in both.

While most transfer students agreed that the pedagogical model in their colleges left students with less “free time” because of the number of courses and assignments that were required, and that the pedagogical model in universities had fewer assignments and enabled more “free time” they also explained that “it's not spare time because you actually have to get [the work] done so it's just it's a different way of working.” Again, students valued aspects of both models noting that “it's not a matter of [being] more demanding... it's just demanding in a different way.”

As mentioned above, most students reported having an expectation of finding a “culture of serious academic inquiry” as they transferred into their various university programs. While students felt challenged by this perception, this was also one of the central motivating factors for pursuing a transfer in the first place. In short, they wanted their university experience to align with this image, regardless of how much it might also cause a certain level of anxiety in them.

College students held an “expectation that... students would be much more serious at university than college.”

While their experiences with the course material, and course instructors bore out this reality, many students reported that broader campus culture did not. Almost every focus group included one or two comments that reflected this discrepancy between the perception of an academic culture at university, and what college-transfer students experienced. Several students noted that they were “surprised ... that...nobody's really taking this as serious as I thought.”

To clarify, these comments were not directed at the academic standards held by the institution they were attending. Rather, they were observations about their student cohort, the orientation process, and the general student attitude that appeared to be more focused on the social aspect of university life to the exclusion of the academic. One transfer student has recently begun her graduate work and only now feels like she is “around people that are like-minded” in terms of their commitment to academics, scholarly research and learning. Many of the reasons for these experiences are examined in a later section of this report “Recognition of disparity in transfer demographics” which highlights the types of groups typically associated with the college transfer process, and the ways that their age, life experience, nationality and previous academic experience have brought a certain amount of focus to their academic goals that is typically diminished in students who transfer directly from high school to university.

There was also a mixed response to the ways that universities structure their degree programs. Some students felt a loss of focus in transferring to a university program, as if they were being required to take courses that did not directly influence their specific educational goals. For example, one student noted that, “You want to learn about Early Childhood Education, [ but to] learn about ECE here you have to take Contemporary Studies classes like World in the 21<sup>st</sup> Century or ...Applied Scientific Reasoning.” However, others experienced this to be one of the advantages to attending university – they reported that their exposure to multiple disciplines and subjects enhanced their overall perspective, challenged them to think about new subjects and to think about their own field in new ways.

### *Class Size*

While most students found their new academic programs to be “well structured” and their “professors very knowledgeable and willing to help in any way,” they also noted the drastic shift in certain aspects of their educational experience –in particular, the size of the courses that they were taking, and their interaction with both their cohort and their instructors.

Most college students reported that, every semester they had “the same people [in] all seven of their classes every day so there was 30 of us [and] it was interactive with the teacher.” They also remarked on the shock they experienced in transferring to an institution whose pedagogical model (in 1<sup>st</sup> and 2<sup>nd</sup> year courses) included large class sizes. Here is how one student explained their transfer experience: “In college my classes there were 20 to 30 people and I knew all my

profs really well and...socialized with them, they all knew who I was. In university ... none of my professors have any idea who I am you just kinda like blend in with the crowd, there's 200 people in your in your courses and you don't really get to know them.” While that student’s comment regarding the difficulties in adjusting to large class sizes was common, their comments about not knowing their professors was unique. The majority of college transfer students reported having very positive experiences with their professors. A more typical assessment of the student -professor dynamic included students who felt as though their professors were knowledgeable, accessible, and willing to help. As one student noted, “a lot of professors do care about students... and want to be there if the students are willing to make themselves available.” The student’s last comment seems to be the determining factor in whether or not a student had a positive or negative experience with their professors.

As this report has previously indicated, college transfer students need to be aware of the shift in academic responsibility. On the whole, university professors were reported as being just as helpful and accessible as their college counterparts; however, where college instructors would pursue students on a more regular basis, in university the responsibility for initiating and maintaining contact with the professor rests squarely on the student. As one transfer student commented, “I was [not] just going to be a number that wasn't going to have any dialogue with profs or anything like that, and I really have been able to. [...] I have been able to take the time and...get one on one consultation which I didn't think I was going to be able to get...which you know makes me happy. I found it...helped me be a better student.”

In fact, college transfer students made astute observations about the roles and responsibilities of university professors, as well as a good deal of accommodation. One student remarked, “students know that teaching is not 100% of the prof's job description, that it's actually quite a small percentage most often...especially professors with tenure.”

One student commented that, in their experience, “a lot of professors do an amazing job of finding that balance between their own stuff and the teaching and the interactions with the students” but were also quick to add that, “there's like a handful of professors that don't enjoy the teaching [or] do it more of an obligation.” These comments seem to acknowledge that students attribute the level of positive or negative interaction with their instructors on an individual, rather than institutional, basis.

Transfer students also speculated about a link between class sizes and assessment models. A number of focus group participants theorized that there might be some correlation between the sizes of those entry-level classes as the proliferation as certain assessment model – such as multiple-choice exams. One transfer student mused, “I guess with 200 people in the class it's hard for the prof to be able to mark, mark through each one of them so it's just quicker to do Scantron.” Thus, transfer students recognized the difficulty in marking short answer or essay-based evaluations of student knowledge in courses with 100-200 students. While transfer students understood the practicality of this possible link, they also reported frustrations with

certain pedagogical models that seemed, in their experience, to limit the types of learning that were possible. Several students mentioned that courses relying exclusively on multiple choice exams as an assessment model limited their learning by focusing on “regurgitating” data from the textbook, and that these assessment models left little room for “critical thought.” While some transfer students liked multiple-choice exams because they were perceived as being easier, the majority of transfer students preferred other assessment models. Significantly, their preference for those other models (such as essay and short answer) were tied directly to their desire to engage in those aspects of “higher order reasoning” that attracted them to university studies in the first place. One student explained it this way: “I prefer the tests that we have now [in university] I find that I learn a lot more and I'm a lot more motivated to pay attention in class and to take notes and to be there otherwise I can just go home and read the textbook on my own and answer those multiple choice questions so I feel like I'm getting more for my money and I'm learning more when I have...the short answer and the essay questions and things like that.”

### *Assessment Models*

Another common assumption is that the modes/types of assessments are radically different in college and university settings. Focus group participants confirmed certain aspects of that assumption, while rejecting other aspects and, again, suggested that changes were discipline specific and related to course size, rather than being institutionally based.

One of the most common comments that surfaced repeatedly in focus group interviews was how unappealing group work assignment were to transfer students. Transfer students were quick, however, to point out that they experienced group work assessments in both college and university settings, and that these experiences appeared to be rooted in the philosophies of individual programs rather than being a part of broader institutional differences. Transfer students who were being assessed through individualized assignments expressed a certain level of anxiety about having their mark depend entirely on their own achievement. These same students, however, also reported a stronger sense of academic accomplishment and pride when they did well.

As well, transfer students across focus groups made continual references to one key difference between college and university assessment models: the number of assignments (assessment opportunities). Most transfer students identified having *more* “free time” in university than they did in college. Part of the reason for this is that college students typically have a higher course load than university students, but also because college students tend to have a higher number of assignments in those courses. While several students noted a certain level of stress as they struggled to manage their time, they also recognized that multiple assignments also meant multiple assessment opportunities. Thus, if a college student performs poorly on one assignment, there are still multiple opportunities to mitigate that mark and do well in the course.

Transfer students noted some difficulty in adjusting to their university's assessment model – one that had far fewer assignments (hence the perception of a greater amount of free time) but one that also had fewer opportunities for students to display their progress in working through course material and impact their final mark. One student reflected on the fact that in college you could perform poorly on an assignment and still have multiple opportunities for success in the course, whereas in university if you perform poorly on even one assignment “you're done.”

Thus, one of the central challenges in assisting transfer students in their transition from college to university is in

1. making them aware of the shift in assessment models and,
2. helping them to develop adjustment strategies.

While this challenge was expressed by almost all transfer students, students transferring into arts programs found it particularly difficult. Their college assessments were often oriented towards group work, or objective, information based content. In university, these transfer students found that assessment models, both assignment and exam formats, required the ability to critique the information being presented, and the ability to express that critique clearly through their writing. As one transfer student put it, “it's not just about...the types of assessment used but the types of knowledge, the types of thinking that you're doing.”

Transfer students reported that they had encountered writing assignments in their colleges, but that everything – from the subject matter, to the formatting, was different from the expectations they encountered in university. One student explained, “in my (college) program we did actually have to write a number of essays but it wasn't that they were lower expectations they were just different expectations, instead of like putting forth your ideas and arguing etcetera maybe you just write a report to reflect on like a practical experience or like if you were writing an assignment about something a little less abstract.”

Regardless of the program, most transfer students reported experiencing specific challenges with writing assignments once at university. Significantly, these challenges did not diminish their desire to have writing assignments as a key part of their assessment model. In other words, while transfer students found writing assignments (or writing based exams) more difficult, they also found them more rewarding. The frustrations they experienced in attempting to adjust to this assessment model had less to do with the model itself, and more to do with the perceived lack of assistance in being able to master it. This aspect of the transfer process is detailed in the next section of this report, “assessment rationale”

*Assessment rationale*

As the previous section mentioned, students' struggles with certain assessment models (writing assignments in particular) had less to do with the mode of assessment itself, and more to do with what students described as a lack of assistance in adjusting to that model.

Some of these struggles had to do with a lack of clarity about what criteria, exactly, the assessment was based on. Whereas some students reported positive university experiences in this domain compared to their college experiences, others did not. For example one transfer student noted that, at university "I find the assessment ...more straight forward and honest...you know what you're going to be marked on whereas in college it's... almost like there's no marking structure." Yet other students reported less positive experiences noting that "in college like I found that the marking structure was really set out ...they said okay we want a 750 word essay and it has to be double spaced and 12 font... and here is how it's going to be marked, it's going to be marked 10% on content, 10% on appearance etc. ...you knew exactly where the breakdown of the mark is whereas [in university] it's just kinda like this is worth 30% like have it in by the due date." Transfer students remarked that there was "not a lot of guidance ...especially for first year university students who haven't really written ... a university essay ever before who need a little bit of guidance writing ...a research paper."

Even with professors who were detailed in their expectations for the assignments, many transfer students felt bewildered by the assessment process. One reported feeling "confused" because they "wrote my first one and I didn't do that good on it and I was really surprised and I had no idea why." Another reported frustration about the lack of comments or feedback on the assignment: "there was critical thinking in writing the 30 page paper and it took a lot of work but we never go any comments." This lack of feedback and the reduced number of assignments in the course left many transfer students feeling as though there was little hope of improvement. They were unsure about what, exactly, to change and even when they did know what to change in the essay writing they often didn't have a second opportunity (in that course) to implement those changes.

Far from discouraging transfer students, the single most common response from them during the assessment process was: how can I do better next time?

## II. The Transfer Process

This section of the report focuses on the responses of transfer students regarding the actual transfer process itself. After some general observations from focus group respondents, the report then outlines the role/helpfulness of colleges in that process, then the role/helpfulness of universities. The final section of the report is broken up into what I have called "Key Issues."

These are the issues identified by the largest number of transfer students, and the ones that they identified as being the most important in their own transfer process.

In general terms, most transfer students found the process to be “very lengthy” adding that “you have to jump through a lot of hoops trying to get stuff sorted out properly.” This was the case even when articulation agreements were in place between the college and university institutions. One crucial observation that emerged in the focus group interviews was that transfer students seemed expected to simply know about the process, or even know how to access help when challenges arose during the transfer process. Thus the problem for many transfer students was not simply that they lacked information about the transfer process, but that they also lacked information about how to access the resources they needed to get it. One participant summed it up by stating, “I think people assume that you know more about the way the university works than you really do”

### *College Assistance*

A minority of transfer students stated “that college has set me up for a lot of success at the university level... by learning how to write and” communicate effectively. However, the majority of respondents, as was mentioned previously, reported that the types of assessment used in college (group work, multiple choice exams) did not prepare them effectively for the types of assessments that they encountered after transferring to a university. However, this was also a very discipline specific phenomenon – several university disciplines utilize similar assessment methods as the colleges do, and the transfer process for the students in those disciplines was obviously less stressful.

When asked about what ways the college assisted students in the transfer process, almost all transfer students acknowledged that colleges were helpful in getting their transcripts sent to university institutions in a timely and effective manner. In fact, no negative comments were made about this aspect of the transfer process. However, most transfer students also responded that, at an institutional level, little assistance beyond sending the transcripts had taken place. In other words, even when the college had an articulation agreement with a specific university, there did not seem to be a consistent, routinized program for assisting students to make the transfer. Some transfer students commented on the lack of assistance in transferring to universities with whom the college has no articulation agreement, but even when colleges were “more knowledgeable with ...institutions that they had transfer agreements with, ...the guidance counselors who we would go to see as opposed to academic advisers... did not know anything about applying to university.”

Several transfer students pointed out that *individual* instructors, faculty and staff provided help with the transfer process. For example one student “went and talked to the program coordinator about the criminology program to see what he thought about Laurier and the program itself. He is a social worker... and he recommended Laurier and he liked the criminology program...”

although he did endorse other universities too.” Other transfer students acknowledged that they had specific instructors who encouraged them to transfer, and helped to prepare them in the process. In each case, however, the transfer student emphasized that these were individual efforts by college faculty and staff – and that what was needed was a more consistent, more organized system to ensure that colleges were taking active steps towards assisting transfer students.

The most common word used in describing the transfer process was - frustrating. Again, this was due, in part, to the perception that there was not only a general lack of knowledge about transfer process in the college they were attending, but also a lack of interest. For example, one participant described their experience like this: “they [the college staff/faculty] were not focusing on the university bound students and what we kept saying is look we're going to university, we know we are going to university...we came here because we needed to upgrade to get to university - so stream us into university.” Comments such as this highlight one of the key challenges that will be discussed towards the end of this report: identifying diversity in the college transfer demographic. Some students are at college as an end unto itself, they are looking to establish a specific skill set with the goal of future employment. As this comment indicates, other groups of college students already know they want to attend university, but view college as a valuable way of transitioning into their university pursuits. The challenge seems to be how colleges will manage the expectations of both groups of students.

### *University Assistance*

Transfer students’ experiences with universities in this process varied. Most of the challenges are outlined in the final section of this report; however, a few aspects deserve mentioning here.

The most general complaint from transfer students is that they are not only at a disadvantage due to the lack of knowledge they have about the transfer process...but they also feel as though they don’t know where and how to access the information needed to answer the question they have.

As well, in transferring into second year courses some participants expressed challenges in terms of the instructor’s perceptions regarding prior knowledge. In other words, they felt as though some instructors took for granted certain domains of knowledge based on the university’s first year curriculum. This left transfer students scrambling to decode which aspects of their discipline they were expected to know, and then to find ways to access that information and “catch up.” This dynamic impacted everything from general knowledge (MLA vs. APA formatting of papers), to more discipline-specific domains.

Conversely, other participants expressed frustration with the amount of academic overlap in transferring from college to university. Several transfer students noted that they had already completed certain aspects of their studies, but had to repeat almost identical curricula in order to satisfy various university requirements. For example, one transfer student remarked: “I’m taking a look at the syllabus and I’m looking at...my stats class, I’m looking at my IT class, [and] I’ve

already done all this. I pull out my old course outlines from college, they match identically and my grades were up there.” Another student noted that, “if I had known that beforehand [...] maybe we coulda worked something out so I wouldn't have to redo something or you know just hash at the same old thing. One class in particular was my organizational behaviour class and it was the same on both ends, same text and everything.” This aspect is addressed in detail in the following section on Transfer Credits.

Some transfer students experienced the process of individualized course selection a bit overwhelming compared to the “block model” that they experienced in college. In particular students identified their frustrations with coordinating the schedule while avoiding course conflicts. Still, others expressed that this flexibility helped them establish work/life schedules in ways that were crucial to their academic success.

### **Key Issue 1 : Accessing Information**

#### *Website*

The school website continues to be an essential aspect of how transfer students access information about the school in general and their transfer process in particular. Several students pointed out that their particular demographic defaults to accessing web based content almost to the exclusion of direct contact with the institution or other forms of information dissemination (i.e. print). With only one exception, every person in every focus group had negative comments about the usefulness of Laurier’s website as a source of information. Transfer students referred to it as “atrocious” and “not user friendly at all” with particular complaints about the ways in which Laurier Brantford’s website merges unexpectedly with the Waterloo website. Complaints ranged from design principles (“the font size is too small”) to more serious issues (“the search engine is flawed and inaccurate”), and most found the website in general to be “very confusing.”

Transfer students also pointed out that the problem was not that the website did not have the information that they needed. In fact, several students mentioned that the website was “cluttered with too much information everywhere.” The central issue for most transfer students was accessing that information from the website was a frustrating and time consuming process.

This is a significant problem given that, as one transfer student put it, “our generation and generation after ours ... would rather go about something on the internet...[it] wouldn't even occur to us to go speak to somebody.”

Frustrations also occur for very practical reasons. For example, when a transfer student says, “if you're coming from a college environment it's a different language [at university]” they are not speaking metaphorically. The student gave a pertinent example about trying to locate what, on their college campus, was referred to as “disability services” – at Laurier, this same department

is called “Accessible Learning.” They now realize that “different schools, different universities call it by different things too so you're not necessarily looking for things with those names.” They continued, “you know what you need but you don't know how to find it because you don't know what it's called.”

### *Orientation Package*

The observations of transfer students were polarized when it came to the actual orientation package that Laurier sends out. Some commented that “it's just not comprehensive enough,” whereas others noted that “it tells you all about you know financial assistance and there's a map for the campus and it tells you basically everything that you need to know prior to coming here so that was very helpful.” The discrepancies in these findings can be attributed, in part, to the particular needs of the transfer student. Many of the transfer students that took part in the focus groups were mature students – so certain information was not pertinent to them at all, and there were certain aspects – like funding opportunities – that seemed neglected.

### *Contact with personnel*

By far, the source that was reported as being most helpful was direct contact with a person on the university campus. Numerous transfer students recalled specific individuals – both staff and faculty – who were instrumental in helping them negotiate the transfer process. It is telling, however, that the person mentioned by the transfer students was almost always someone different:

Transfer student 1 - “You need to talk to your undergraduate adviser about everything that you need to transfer and what to expect and what the course load is like and what kind of courses you need, there is an...undergraduate adviser for each program [who] is ... the key person to talk to when you're transferring”

Transfer student 2 – the key to getting information is to “get to know your Dean of Students or at least know who she or he is”

Transfer student 3 – I found it most helpful to “introduce myself to my professors.”

In other words, transfer students availed themselves to a number of various faculty and staff with varying degrees of success, when what was needed was a point person, or office that was well promoted (so that they knew to go there for information) and that has the information that they need. A common refrain among transfer students in the interviews was that “once you got connected with some of the people the process went a lot smoother; it was actually getting connected...that was the struggle or the challenge.”

Regardless of the medium used for the inquiry – electronic, university publications or tracking down staff and faculty for assistance – the method of inquiry was equally as crucial to accessing the information that was needed. As one student phrased it, “you think you're asking the right

questions and you're not getting the response and then you realize afterwards you really weren't even asking the right questions or the right people.”

### *Timing*

Timing also proved to be a crucial aspect to how equipped transfer students felt in the process. Participants cited some issues regarding when they received responses to inquiries, acceptance notices, or information from Academic Advising - in particular over the summer. As well, respondents noted that having more than one person working on their file lead to some issues of miscommunication, and a lack of clarity. Transfer students seemed to get multiple answers from various sources each time they talked to someone new. In other words, there appears to be a need to consolidate, establish, and communicate uniform guidelines among staff and faculty.

### **Key Issue 2: Recognition of disparity in transfer demographics**

Several of the issues identified in this report were the result of a type of thinking by universities – one that considered transfer students as a homogenous group. In fact, the transfer student population is comprised of a very disparate collection of smaller groups, each with their own unique sets of needs and challenges. These group differences impacted everything from how information was accessed to actual course selection.

For example, one grouping, whom I have designated “similar program transfers” (students who are transferring from college to university but remain within the same discipline or field: college students studying finance that transfer to a university business program) had sets of challenges that were unique to them, in particular course material that overlaps between college and university. Conversely, another group “alternate program transfers” (students whose field of studies at college are now markedly different at university: college students studying finance that transfer into a university arts program such as History, English or Journalism) faced an entirely different set of challenges, in particular grappling with the new expectations regarding writing assignments. International students faced their own sets of challenges that included language and culture barriers, financial obstacles and the applicability of previous educational experiences.

Among the groups encountered at the focus group interviews, the largest group (and the most vocal) was what I would term “Mature Students.” Yet even within this category there is broad range of diversity. For example, in one group a single 22 year old student who still lived at home self-identified as a mature student, but the term equally applies to another student who was 40, married with children and owned their own home.

For example, in commenting about the orientation package one mature student remarked, “It's not meant to be anything other than a welcome package to someone coming out of high school

that lives with their parents as a mature student who lives on their own who has their own ...family it's not helpful.”

In spite of the range of diversity in age and familial situations, all of the mature students interviewed shared a similar attitude towards their academic life at university. Whether they were 40 or 22, all of them approached their university studies with tremendous focus, determination, and seriousness about their studies and a strong desire to succeed. One, younger, mature student remarked: “I chose not to go to O-week because...I wasn't coming and I mean this might sound terrible but I wasn't coming to make friends and make cool t-shirts.” In other words, most mature students were focused on the academic portion of their university experience, whereas younger, non-transfer students, were interested in exploring multiple aspects of university life.

One of the challenges mentioned by mature transfer students was in meeting/connecting with people. Most mature students are transferring in at year two, which means that they have missed that initial orientation week. Regardless of the other, more social activities, that week is also very helpful in getting to know the campus and surrounding area, meeting with various staff and faculty and being aware of important campus opportunities (such as study groups).

Self-identifying mature students found professors to be approachable and flexible with their challenges.

In any case, each of the aforementioned groups has their own unique set of challenges that need to be addressed. The university can be more effective in assisting them with those challenges by identifying the demographic grouping they belong to, and developing group specific strategies rather than inundating all of the groups with generalized information that may or may not apply.

### **Key Issue 3: Credits**

The role that course credits play in the transfer process cannot be overestimated. Every transfer student in every focus group mentioned challenges with some aspect of the credit transfer process.

#### *Information about credits*

Transfer students reported that it was difficult to find information from either their college or university about transfer credits. These students did not know what these credits were worth, what they would be applied to, or why they didn't count in the way a student thought they might.

Transfer students noted that there was no page on their college or university website that explained this process, and nothing in the orientation package. Even when students were in direct contact with university staff they often left the meetings without having clarity regarding

those questions. For example, one student noted that the “academic advisers...weren't 100% sure which classes were being applied and which classes weren't being applied.” Even still, students commented on the role of the academic advisor and see them to be a crucial link in the transfer process. They are often the front line in terms of contact with students and dissemination of information.

This lack of clarity resulted in an increasingly accumulative negative impact for some transfer students. For example, as one student reported: “I had to drive back and forth a few times because nobody could tell me what my credits were for, they gave me my transfer credits but then you have to build your own schedule and I wasn't aware of which credits would cover which courses.” Once they had signed up for courses, built a schedule and began their studies they realized that the credits would not apply in the way that they thought...but by then they were mid-way through a semester and to change courses then meant a loss of money and time.

Even when information about transfer credits could be accessed, almost every student mentioned challenges and concerns regarding how the credits were awarded during the transfer process.

#### *Amount of transfer credits*

The amount of transfer credits a student receives is an important part of decision making process. Some transfer students choose Laurier based solely on those criteria, indicating that they would have attended whatever institution gave them the highest number of credits for the academic work they had done in college. Others choose Laurier in spite of not getting what they wanted because of the program selection or geographic convenience.

At least one participant felt shortchanged because he received so *many* credits. This transfer student received 7 credits, and the number of those credits was reported as playing a significant role in their decision to attend Laurier. However, now that they are moving on to grad school they felt as though they had missed out on specific skill sets that they would be needing: “that I got 7 credits for accounting but I don't really think that they were relevant to criminology or contemporary [studies]” areas that those credits had been applied to. The student continued, “as I'm applying for Master's programs I'm finding that all of them are asking for specific skills that...I didn't learn... [qualitative and quantitative analysis] I felt like I learned about them but not how to do them.”

A few other transfer students had similar thoughts as they finished their university degree: whereas they were happy to have a large number of credits applied when they began their university studies, they now regret missing out on some potentially important aspects of the material they received credit for. These cases could be considered an exception to the more typical complaint that was vocalized in the focus groups – that students did not receive the number of credits they thought they would for the academic work they did in college.

In addition to the amount of transfer credit students receive, transfer students reported being perplexed by the seemingly arbitrary manner in which those credits would be applied. In the example stated above, the student received credits towards a criminology degree because of academic work they did in college accounting programs. Another transfer student had already completed a certificate program in marketing, but even completing the two-year program did not exempt her from having to take a marketing course at the university she transferred to. As the student explained, after getting a diploma in marketing, the university awarded them “a Business Law credit. But I didn't get my Marketing credit [from university] so I had to take my Marketing class here which I didn't complain about but I had a diploma in Marketing so that just kind of my entire college experience didn't make up for that one credit.” Some of these experiences have led transfer students to question the way that universities value (or don't) the academic work that they are doing in college – even colleges that have existing articulation agreements with those universities.

In a similar manner, transfer students had questions about the criteria for accepting or rejecting previous academic work. One student remarked: “I did receive credits for courses that I...didn't excel in, that I was surprised to see credit for but then courses that I have done very well in college I have to retake and that was something that...I was confused by - obviously they didn't see the same learning objectives between my university and college.”

The last area of frustration for transfer students regarding transfer credits is their application of those credits towards electives. Numerous students reported that almost all of the credits they did receive “ don't apply to their program [and] only count for electives.” As one student explained, “when I first transferred from college here they (Laurier) guaranteed me six credits, that's what a year and a bit? But with the program that I'm in, that doesn't do anything for me.” As this report indicated earlier, many transfer students report benefiting from the ways they are able to explore other subjects and challenge themselves in other field of inquiry, outside of their own principle field of study. By only transferring course credits as electives, some transfer student felt as though this limited the university experience.

**D. Faculty /Staff Interview: Report**Methodology

15 single participant interviews that include 4 Faculty members and 11 Staff members from various departments at each campus. 60% of the Faculty/Staff that were interviewed work at the Brantford campus. The following is a list of questions asked at the single participant interviews.

1	What kinds of questions do transfer students bring to your office?
1a	Do you get any questions regarding extracurricular programs?
2	What kinds of comments do transfer students make about university versus college?
3	In your opinion what kinds of challenges in transitioning to university do college transfer students experience?
4	Do college transfer students bring different questions to you than other students?
5	How does your office promote the possibility of transferring from college to university and the credit transfer process?
6	Are there any other issues that you would like to comment on?

*General Comments*

Laurier Brantford staff have significant experience with college transfer students. These experiences have created a high level aware of awareness regarding the challenges and experiences encountered by this group. Even those involved in admissions and recruiting have at least a passing familiarity with the challenges that college transfer students encounter in their move to university. Laurier Waterloo staff seem more familiar with recruiting and admissions issues, but are less familiar with the issues encountered once college transfer students begin their studies.

This disparity in information is, in part, a reflection of the different roles played by faculty and staff regarding college transfer students on the two campuses. At Laurier Brantford, staff are the frontline for college transfer students and their issues. Unless college transfer students self-identify, faculty are unaware of their specific presence in the classroom. However, this identification could entail both positive and negative effects. While faculty who are aware of college transfer students in their class may be more sympathetic to the challenges they may face; knowing who college transfer students are could just as easily lead to differing expectations or evaluations – deliberately or unconsciously – at the evaluative level. (The same issue may arise with Accessible Learning students as well, who are automatically identified by an e-mail from Accessible Learning to faculty.)

At the Waterloo campus, however, the faculty (especially the undergraduate advisors) are the primary contacts for college transfer students once their studies begin. While the experiences of

the two Undergraduate Advisors who were interviewed differed significantly, the limited pool size of interviewees necessitates a corresponding limit on our evaluative claims.

In general, faculty interviews were much more difficult to procure than staff interviews. Staff are aware of the fact that they are dealing with college transfer students while faculty, without self-identification, are not aware of who are and are not college transfer students in their classes. The only faculty who are already aware of college transfer students are Undergraduate Advisors in Waterloo, and only two agreed to be interviewed for this study.

### *Brantford Staff*

Laurier Brantford staff exhibit a high level of awareness that the university experience for college transfer students is very different from that of students that attend university directly from high school [HSD]. Those interviewed noted that college transfer students are often concerned with grade point averages and with being able to finish their degree program in the minimum amount of time possible. If prerequisite courses are not always offered, this can cause delays for college transfer students' graduation process. Laurier Brantford staff further noted that these delays are not only costly, but can also cause anxiety which negatively affects these students' overall university experience.

Some students experience transfer shock in the mistaken belief that they can handle the transition from college to university with a comparable or even increased course load (again, in the rush to complete their program requirements).

Furthermore, because college transfer students are usually several years older than HSD, they often have additional concerns regarding course scheduling and course choices. College transfer students often have to juggle commuting, family, and employment commitments. The relative open scheduling of university courses (including evening courses) can sometimes cause issues with college transfer students attempting to create a homogenous schedule which leaves little free time during the periods they are on campus, but groups all their courses into convenient blocs.

College transfer students also struggle to fit into the broader university culture. Too few college transfer students attend either Headstart or Orientation Week to become aware of the new procedures and amenities available to them. This can lead to confusion about what to do in certain administrative circumstances, or it can lead to missed opportunities in terms of social or extracurricular activities. This may be a matter for greater concern when Laurier Brantford becomes more active in intercollegiate athletics.

Brantford staff, therefore, find themselves involved in more elements of college transfer students' lives and academic careers. Some recommendations include more careful monitoring of college transfer students' academic progress to ensure that transfer shock is mitigated or

eliminated, and the creation of a Headstart-style program that is designed specifically for college transfer students at the beginning of term to acclimate them to university life and culture.

### *Waterloo Staff*

The preponderance of staff interviews in Waterloo were with those involved in admissions and recruiting. However, one staff member more actively involved with college transfer students once they are in their studies noted that college transfer students contribute to the university in two important ways, one academically, the other on an administrative level. First, as older students, college transfer students tend to have an influence in classrooms because of their maturity and experience. They are a resource instructors can draw upon in class discussions and group projects. Second, college transfer students have less of an impact financially on the university – they do not need bursary incentives to the same degree needed to recruit in the competitive environment of HSD, they do not require the programs for support that less-mature HSD need, and they are far more likely to be at university because they want to be, not because someone else is paying for them or coercing them to be there.

### *Brantford Faculty*

Only three Brantford faculty members agreed to be interviewed for this study, and one interview was unusable because the interviewee had misunderstood the subject of the study. The other two interviews noted the focus and determination of college transfer students in having a very specific goal in mind for their university studies. Furthermore, if thwarted or frustrated in achieving that goal, college transfer students can become disillusioned or angry with the ‘system’ which appears to be working at cross-purposes to their goals. One faculty member also questioned whether the process of admitting college transfer students was always working to full effectiveness, that prospective college transfer students were being turned away because they did not fit into narrow criteria defined by the university.

### *Waterloo Faculty*

Only two faculty members at Waterloo agreed to be interviewed, and both also serve as Undergraduate Advisors for their respective departments. They related quite different experiences in dealing with college transfer students.

The first faculty member had a number of college transfer students coming to the department having taken courses in that discipline in college, and wondering why what appeared to be identical college and university courses were not considered such. It required an explanation of the theoretical applications that were more prevalent in university-level courses and that were not present in apparently comparable college courses. From this person’s experience, Ontario colleges are not filling the role played by US community colleges or the CEGEP system in Quebec, as a transition institution between high school and university.

As well, as an Art-related discipline, it tended to attract college transfer students that were completing degrees in a program such as Business and who were looking for an “easy” elective course to fill a credit requirement with fewer demands on them. Instead of finding a “bird course”, these students were discovering that demands were being made on their time and intellect that they had not expected or wanted.

Finally, Laurier Waterloo faculty reported that college transfer students seem frustrated by course requirements and prerequisites, especially when transfer credits are useful only for general course requirements. This causes issues in choosing courses, especially when trying to meet specific requirements for degrees.

The second faculty member reported fielding more “traditional” questions (mainly regarding the number of awarded transfer credits) from college transfer students, but again the issue was complicated by whether the students self-identified as college transfer students or not.

### **III. Limitations of the Study**

Since the 2008 cohort was the earliest data set obtained, we were unable to appropriately assess graduation rates. Very few students had applied to graduate at the time the data was generated. Future studies should consider obtaining data from cohorts a minimum of 6 years removed from the current year to ensure that graduation rates/time to graduate could be obtained in sufficient numbers to allow for useful comparisons.

The environmental scan is limited because of the sheer number of locations that this information is contained at so it is possible that minor policies may have been missed. In addition, since many policies are general and final decisions are made on a case-by-case basis, the environmental scan can only represent the stated policies and not the eventual final individual decisions made at the student level. Furthermore, even during the limited duration of this study, it was noted that several institutions changed their policies, which required an update to the data being analyzed. Future studies may consider gathering data in Fall months when students have already enrolled at an institution rather than in the Spring months when students are gathering information with which to decide which institution to attend and institutions are changing their policies in anticipation of student information requests.

The response rate from the students themselves was low. Focus groups were held at various times and days across both campus locations in early February in an attempt to provide students with as many opportunities to attend as possible. Future studies may consider some sort of compensation for participation to increase overall numbers. An online “sign-up” system may also help participation by reducing the amount of work a student would have to do to find a convenient time to participate.

The response rate from faculty was very low and this may be in large part attributable to the fact that faculty cannot readily identify which students in their courses have previous academic experience at the college level. Unless students choose to self-identify, there is no way for a faculty member to access this information and thus may not be aware of the proportion of college transfer students that they have had in any of their current or past courses.

In a similar fashion, unless a student self-identifies to a staff member, that staff member would have no way of knowing their academic background. Academic advisors (staff at Laurier Brantford, faculty at Laurier Waterloo) would be the exception to this rule, but they would also only have experience with students who have chosen to arrange for an appointment. This study did not gather data on the number of college transfer students who have arranged for academic advising vs. the total number of college transfer students on either campus.

#### IV. Recommendations

- One online location for all formal articulation agreements and transfer credit policies is recommended to make it easier for prospective college transfer students to obtain the information they need to make an informed decision regarding which institution to attend and how their credits will be applied upon admission. Furthermore, one location would ensure a higher degree of transparency with the transfer credit information itself. **This does not necessitate, nor does the data indicate, that there is a need for a single system-wide transfer credit policy.** In fact, the data suggests that a single system wide transfer credit policy may not be effective in accommodating any given student.
  - An online location with an interface to access this type of database would be useful if a minimum of four fields could be used to access individual information
    - College
    - Diploma program
    - University
    - Degree program
  - A student would input their specific college and diploma program and then choose a university and degree program they were interested in. The database would be polled and the number of transfer credits awarded on a general basis would be provided. The student would then be advised to contact the specific universities that they are interested in to get information on their individual case.
- In addition to having articulation agreements with individual universities, colleges and universities could develop “transfer streams.” This means that colleges could offer programs designed specifically for students whose desire is to transfer to a university. This could include establishing (in conjunction with university faculty and administrators) a core curriculum that helps to prepare students for the types of assignments and types of analysis that will be required once they transfer to university. This stream could also be designed so that the credits they are earning are clearly defined units of the program they are entering into. (Trent University currently employs such a model for some of their programs)
- One suggestion put forth by a transfer student was to establish a “university adviser at the colleges.” Literally to create a position in colleges that was dedicated to disseminating accurate information about universities, helping to form the curriculum for transfer streams, and for assisting students in the transfer process.

- If a full time position cannot be created, transfer students recommended that some representative from the university be sent to hold information sessions, workshops, etc. at local colleges. As one transfer student stated: “the university has to start looking at the college as its recruiting grounds. There's some really good students out there that do want to continue on a university level of education.”
- Several students utilized family members or friends at the institution as access points to the information they need...one even suggested this as a possible solution to the problem of connecting transfer students with the information that they needed. This transfer student suggested that one “solution is talking to 4<sup>th</sup> year students,” implying a type of mentorship program with previous transfer students, so that the information can be customized in all of the ways mentioned – everything from the individual’s program requirements to life/family situations.
- The creation of Headstart programs and/or Orientation week events specific to college transfer students may help these students navigate the non-academic aspects of university and also allow them the opportunity to make social support connections, which may increase the chance that these students can engage in dialogue about academics at the university level prior to the beginning of their first term of university study.
- Although a comprehensive block transfer credit policy is available at Laurier Brantford, it is necessary to also include rationale for why certain college courses are not equivalent to certain university courses. This will provide academic advisors and faculty the information that they may need to discuss, in an informed fashion, why certain transfer credits are awarded and applied in a specific context.
- Transfer students reported that they had encountered writing assignments in their colleges, but that everything – from the subject matter, to the formatting, was different from the expectations they encountered in university. Significantly, these challenges did not diminish their desire to have writing assignments as a key part of their assessment model. Thus, one of the central challenges in assisting transfer students in their transition from college to university is in
  1. Making them aware of the shift in assessment models and,
  2. Helping them to develop adjustment strategies.

- To address these concerns we recommend:
  - Mandatory, writing intensive course for transfer students – though, given the type of feedback that they are looking for, this would have to be run in small class sizes.
  - Forming closer partnerships with existing academic support structures (such as the Writing Centre) geared specifically towards transfer students and their needs.
  - Multiple, smaller, writing assignments so that changes in writing can be implemented, and so that there are a greater number of opportunities for students to alter their overall mark in a course.

197		General/Degree Spec LAKE	LAKE	2011-08-01	Honours Bachelor of Arts and Science - Criminology Transfer Program	Graduates of diploma programs relating to Criminology (e.g. Police Foundations, Law & Security Administration, Community & Justice Services, etc.) with a minimum overall "B" (70% or 3.0 GPA) average, are eligible to apply for admission consideration to our Honours Bachelor of Arts and Science (HBASc) Criminology major program.	Students may receive credit for up to 6 full course equivalent courses toward the Honours Bachelor of Arts and Science - Criminology major program. This would place them into Year 2 of the 4 year program.	Students must complete the final 3 years of the Honours Bachelor of Arts and Science - Criminology major as outlined in the Lakehead University course calendar plus any other course deemed missing following admission assessment.	This program may be completed in 3 years.	Students will receive an Honours Bachelor of Arts and Science - Criminology degree.	DEG	3.0 out of 4 B			
198		General	LAKE	Not posted	Undergraduate Degree (Multiple Disciplines)	Students must be accepted to Lakehead University before a transfer credit assessment is undertaken. Official transcripts, a document evaluation fee (\$55) and institutionally prepared course descriptions must be submitted to the Office of Admissions in order to process the transfer credit request. The Office of Admissions evaluates each student on a case by case basis. The amount of transfer credit received depends on a number of factors including Grades, previous course work, and the program applied to at Lakehead University. A minimum overall GPA of 3.0 (B or 70%) must be achieved in an accredited two or three year diploma program for transfer credit to be considered. Generally, a maximum of 3 full credits may be awarded for two year diploma programs and a maximum of 5 full credits for three year diploma programs.	Predominantly, applicants from a 2 year diploma will receive a maximum of 3 transfer credits depending on individual assessment and program of choice. Applicants from a 3 year diploma will receive a maximum of 5 transfer credits depending on individual assessment and program of choice.	Dependent on transfer credits awarded (credits assessed and awarded on a case by case basis).	Normally, upon entry to a level I program, a three-year program will be completed in three years. Transfer students may receive up to 0.5 years of advanced credit reducing the time to completion from 3 years to 2.5 years.	Undergraduate Degree (Multiple Disciplines)	DEG	3.0 (B or 70%)			
199	Franshawe	Transfer Agreement	MCMA	2005-12-01	BA, Humanities or Social Sciences	Graduates of the one-year Certificate program at Franshawe who achieve a minimum overall GPA of 3.5 (B2.5%) with no grade less than C may be admitted into Humanities, Year 1 or Social Sciences Year 1 with transfer credit granted as outlined under Credit Transfer. The following courses are excluded from the calculation of the overall GPA: General Education qualifying courses, introductory language courses, and personal skills courses. In addition, Franshawe College will provide McMaster University with a list of any new 7000-level courses that may be added to the Liberal Studies program, which are not part of the Liberal Studies offerings each year and McMaster reserves the right to exclude other courses in the GPA calculation.	Students will receive in the range of 3-15 units of advanced credit based on an approved list of course equivalencies as follows: HST 7001 = ART HIST 1A03 and 1A03 ENGL 7002 = ENGLIST 1G06, PHIL 7001 = PHLOS 1B03 and 1E03, PSYC 7001 = PSYCH 1A03 and 1A03, SOCI 7001 = SOCIOI 1A06, WWST 7001 = WOMEN ST 1A03 and 1A03.	A three-year degree program requires the completion of a minimum of 90 units. Advanced credit (3-15 units, depending on assessment) will count towards the total unit count required. 					A three year Ontario College Advanced Diploma in Child and Youth Work with at least a B / 3.0 average, and non-academic requirements as noted on our web site, are required for admission consideration. Subject to competition, candidates may be required to present averages/grades above the minimum. NOTE: Potential students with extensive work experience in the field but with post-secondary academic credentials other than the three-year Ontario College Advanced Diploma in Child and Youth Work, must apply to the four-year program and be considered on an individual basis.	Credit for two years of a four year program is granted on the basis of the Advanced Diploma in Child and Youth Work.	Students must complete all courses from years three and four of the Child and Youth Care program.	Students normally complete the full-time program in two years, and are allowed up to four years. The number of years allowed to complete the part-time program is seven.	Bachelor of Arts (BA) in Child and Youth Care/Bachelor's Degree in Child and Youth Care/Bachelor's Degree in Child and Youth Care	DEG	3.00 or B	N/A			
			2002-09-01	Disability Studies	An Ontario College Diploma in Developmental Services Worker, or other disability-related program with a concentration in the area of disability (e.g., Social Service Worker), with at least a B+ / 3.5 CGPA is required for admission consideration. The diploma must include a one-year introductory university-level humanities or social science course or equivalent. AND two years (or equivalent) related work/advocacy experience. Applicants without this may be accepted, but must either complete DST 80Y/B Practicum in Disability Studies in the program or apply for exemption if achieved while in the program. Applicants with less than a B+ / 3.5 CGPA in an acceptable college diploma program may be asked to complete up to two single-term university level liberal studies courses prior to admission. Applicants with other post-secondary academic backgrounds and extensive work experience in the field may be considered on an individual basis.	This is a specially-designed Degree Completion program for graduates of acceptable college programs. Graduation from a relevant college program is required for admission and graduates must complete 28 one-term course equivalents to qualify for this Bachelor's Degree.	The number of credits required to graduate from the program is 28 one-term course equivalents.	As a part-time program, students are required to complete the program in no more than eight years. Most students will complete the program in less time by planning their course selections carefully. The completion time will vary with the number of courses taken each year. 					Transfer Credit Applications will be accepted after a student has confirmed their offer into an undergraduate degree program or received registration confirmation into a certificate program. Ryerson reserves the right to assess Transfer Credits on an individual basis and to make such changes in Transfer Credit equivalencies, regulations and policies as may be required. Courses from accredited colleges and institutions of technology may be considered for Transfer Credit when completed with a grade 70 percent or higher (where 70 percent equals B-). Courses must have been taken within the past ten years to be eligible for Transfer Credit. Students can apply for as many Transfer Credits as possible based on completed external courses; however, no more than a total of 50 percent of the program's curriculum requirements may consist of Transfer Credits. As transfer credit assessments are undertaken by school administration without direct consultation with a students chosen faculty or program specific students are cautioned that not all granted Transfer Credits may be applicable to their program of study and graduation requirements. To determine what Transfer Credit(s) will apply to their program, full time students must form an Advisement Report on RAdvis(y)erson's online student center).

332	Fanshawe	Transfer Agreement	WEST	2010-05-31	Bachelor of Arts	This agreement relates to students studying in the Liberal Studies Major within General Arts and Science at Fanshawe. Effective September 2010, the Faculties of Arts and Humanities and Social Science at Western each agree to accept a maximum of 30 students each September provided that: a) Applicants completing either first-year or second-year of the Liberal Studies Major will be admitted to all first-year if they receive up to 2.5 transfer credits at Western for courses completed in the Liberal Studies Major; b) second-year if they receive 3.0 or more transfer credits at Western for courses completed in the Liberal Studies Major; c) Those eligible for first-year admission must have completed a minimum of 10 courses in the Liberal Studies program and have achieved a minimum overall 3.5 GPA with no grade less than "C". The following courses are excluded in the calculation of the overall GPA: courses entitled General Education, qualifying courses, introductory language courses and personal skills courses. In addition, Fanshawe will provide Western with a list of any new courses that may be added to the Liberal Studies offerings each year and Western reserves the right to exclude other courses in the GPA calculation. Courses completed during the diploma program, which are not part of the Liberal Studies Major, and courses completed after the completion of the diploma program will not be counted in the overall cumulative GPA.	All applicants who have completed either one year of the Liberal Studies Major or the two-year Liberal Studies General Arts and Sciences Diploma as indicated above will receive transfer credit provided that: a) Applicants achieve a minimum grade of "C" in each course considered for transfer credit; b) The courses considered for transfer credit have been pre-approved by Western through appropriate University procedures including curriculum review. The following 2000 level courses have been approved: English, Sociology, Philosophy, Psychology, Women's Studies, and History of Western Art; and/or Fanshawe transcripts clearly indicate Liberal Studies, General Arts and Science Division, so that Western may identify potential applicants. No credit will be given for courses deemed by Western to be equivalent to courses below 1020 level or equivalent at Western. All other General Arts and Science students	Students will be required to complete eleven (11.0) to fourteen (14.0) credits depending upon the total number of transfer credits granted at the time of admission. The number of courses required to complete a degree will depend on the ultimate degree objective and the area of concentration chosen by the applicant.	Students will take a minimum of two to three years of full-time study for a 15 course general Bachelor of Arts degree.	Bachelor of Arts (Multiple Majors)	DEG	3.00	C

793	General		WLUB	2009-01-01	Bachelor of Arts (Honours) - Multiple Majors	College of Applied Arts & Technology Transfer credit will be assessed at the time of admission. Assessments are automatically completed for all applicants presenting official final transcripts from post-secondary institutions. Students admitted into Unclassified Studies or under Academic Probation, are not eligible to have transfer credits assessed until they are in a program leading to a degree. After being placed in a program students have 12 months to have your credit assessed. College of Applied Arts & Technology Transfer students will normally be awarded up to 2.5 credits for completion of one year of a program, up to 5.0 credits when a student has completed a two year program or up to 7.5 credits for a three year program. Transfer credit is dependent upon the College program and course completed. The grades achieved, and the program the applicant is entering at Laurier. Transfer credit is normally awarded in the form of Junior non-specific (elective) credits. Courses in which you have achieved less than a B- will not be considered for transfer credit.	a) The maximum number of transfer credits available per year of college study is 2.5 units (3 term courses). b) A maximum of 7.5 units (15 term courses) may be awarded for graduates of a 3-year program.	a) For a general degree without designation students must complete at this university a minimum of 5.0 senior credits (or equivalent). b) For an honours degree, all students must complete a minimum of 10.0 credits (or equivalent) at Laurier.	Dependent on the program chosen and the number of transfer credits awarded.	Bachelor of Arts (Honours) - Multiple Majors	DEG	B- (70%)	N/A

					Applicants from colleges accredited by the Association for Biblical Higher Education (ABHE), formerly the Accrediting Association of Bible Colleges (AACBC), may be granted advanced standing. Two years study are required for applicants who did not previously complete the necessary minimum requirements for admission to the university (high school transcripts may be required). A minimum of a B- (70 percent) grade must have been attained in the appropriate course(s) for transfer credit consideration. Only academic courses will be considered for transfer credit; no credit will be granted for professional courses such as education, administration, pastoral studies, counselling or courses of a doctrinal nature. Usually not more than 3.0 credits in religious studies will be considered for transfer credit.	Generally a maximum of 3 credits. Depending upon the selected level and area of study, the student may receive the equivalent of up to ten course equivalents (5.0 full credits). Transfer credit is awarded for approved courses with a minimum grade of B.	Determined on a case by case basis bybauer.Bartford Admissions.	Dependent on the program chosen and the number of transfer credits awarded.	Bachelor of Arts (Honours) - Multiple Majors	DEG	B- (70%)	N/A
